

# So-Low ULT Freezers & Refrigerators with Integrated Remote Temperature Monitoring Solutions

With Mobile Alarm Systems, You'll Maintain Peace of Mind When Away From the Lab

Since 1959, So-Low has manufactured a wide variety of cold storage freezers and refrigerators, providing dependable, efficient solutions to customers. Seeing our own efforts reflected in theirs, we've partnered with So-Low to enable CORIS 24/7 remote temperature and electric current monitoring to be integrated directly into their freezers and refrigerators during manufacturing. So when lab professionals receive their new freezer or refrigerator, they'll already have the technology in place to safeguard samples and specimens — whether they are inside or outside of the laboratory.

## Pair Reliable Freezers & Refrigerators with Sophisticated Monitoring Technology

### So-Low Benefits

- Extended compressor life via an energy-saving stage that operates on demand
- Compressors remain protected with a constant flow of refrigerant
- Heat is efficiently and effectively dissipated by an air-cooled dispenser with three fans
- The condenser requires no liquid coolant
- Automatic timer system that restarts the unit in the event of a power failure
- Heater harness under channel cap chamber reduces frost and ice buildup along gasket
- Use of CFC-Free R-508B and R-404A refrigerants
- Digital temperature control with dual display and adjustable temperature range
- Unique design lends itself to very low system pressure, avoiding excessive heat buildup

### CORIS Benefits

- Alerts are sent out instantly to notify your team of temperature variation and loss of power/communications
- Users can select how they want to receive alerts (e.g., text message, email, phone)
- Sensors log and transmit encrypted readings to CORIS cloud servers every 2 minutes
- Logged temperatures are stored permanently on CORIS servers
- Reports are automatically generated to meet all compliance requirements
- Patented network security doesn't require a hole in the firewall, and no on-site servers
- Unlimited alerts and permissions are provided to authorized personnel
- The web-based user interface is intuitive and requires minimal training to use
